AutoCAD LT supports a custom API named DDI (Drawing Data Interchange) which can communicate with third-party products and external files. Also included is the Dynamic Drawing Interchange Format (DDIF) which can be used to open, modify and save AutoCAD DWG drawings, objects, blocks and templates. Customization AutoCAD allows the import of external data and objects and provides a set of APIs to access and manipulate that data and objects. Many of the standard items in AutoCAD such as drawing templates, blocks, and blocksets can be customized. Templates and blockdefinitions for example are customizable and can be saved for later use. The design and use of customizing objects and files in AutoCAD or AutoCAD LT is covered in detail in AutoCAD Essentials: An Autodesk Authorized Course for Beginners. API AutoCAD contains several API's that allow third-party developers to add customized functionality to the program. As well as the DXF and DWG format files, there is a custom API, named DDI (Drawing Data Interchange). DDI is used by third-party products to communicate with AutoCAD drawings and DWG files. This allows for a more efficient workflow and facilitates the sharing of AutoCAD objects. DDI is discussed in more detail on the Autodesk Developer Network. There are also APIs that allow access to external data, such as data from Microsoft Excel files and Photoshop files. Autodesk Exchange Apps Autodesk Exchange Apps are for third-party developers to create add-on products for AutoCAD. The Exchange App is meant to serve as an extensible runtime platform that allows you to add and configure tools and features to AutoCAD. For example, the Exchange App gives a developer a way to add and configure other forms of data into the drawing environment, such as bar charts, networks, pipes, and so on. Autodesk Exchange Apps can be updated by Autodesk through the Application Manager See also List of vector graphics editors Celestia Illustrator (non-AutoCAD version) Inkscape (non-AutoCAD version) PageMaker (non-AutoCAD version)
